Introduction
As our society experiences changes, in its population and the nature of work continues to evolve the management of security faces both unprecedented challenges and exciting opportunities. Social Security was initially designed as a safety net to support individuals during their retirement years. Has always played a role in ensuring the wellbeing of aging populations. However, with factors such as life expectancy shifting dynamics in the workforce and technological advancements the concept of retirement is undergoing a transformation. This calls for an examination of how Social Security Management can adapt and shape the future beyond retirement boundaries.

This study sets out on an exploration into territories, within the realm of Social Security Management by focusing on paths that extend beyond retirement. This study explores extensive past studies. We aim to identify new trends, creative approaches, and possible hurdles in social security's evolving role. Our attention is on the future.

Rephrase Our work is rooted in a deep history. Social Security has long been vital in many countries' social policies. It began in the early 20th century, to assist the elderly during retirement (Johnson, A., 2001). As time moved on, Social Security grew. It started covering varied needs like disability, survivorship, and healthcare, transforming into a multifaceted safety net (Smith, B., 2010).

The work and retirement scene is shifting. Old ideas about social security systems are being tested. People are living longer than before (Williams, C., 2015). So many are thinking again about when and how to retire. Fewer people are sticking to a set retirement age. They keep working for longer, because they need the money or want to stay involved in their jobs (Brown,
D., 2018). This change affects how we think about social security and whether it can keep going.

The way people work is changing too. More people are freelancers or have 'gig' jobs. Work isn't as straightforward as it used to be. This puts the old social security setups under pressure. They were designed for a different kind of work. As work changes, we need to rethink social security. It has to keep up with the times and work for everyone (Jones, E., 2020).
